O. MACHHOLZ
Seed Co.

NEW GREEN MARKET - - 1316 N. FIFTH STREET
MILWAUKEE, WISCONSIN

ARMOUR'S BIG CROP FERTILIZERS

FERTILIZERS ARE PLANT FOOD CARRIERS

Nitrogen, referred to as Ammonia, is directly associated with the formation of leaves and stems in plants, promoting a quick and vigorous growth which is accomplished by a deep, rich green color of foliage—a sign of health and activity.

Phosphorus, known as Acid Phosphate or Phosphoric Acid, hastens germination and favors rapid development of young seedlings, increasing the root growth, thus giving the young plant a good start. The formation of grain and fruit begins sooner when applications of soluble phosphorus are freely made. Phosphorus fills out the grain and fruit, increasing the proportion of grain to straw.

Potassium, commonly called potash, has a marked influence upon the development of leaves and stems. When potash is lacking, stems are apt to be weak and brittle. Potash enables the plant to produce sugar and starch, and helps to plump and fill the grain. It is also necessary in developing the fleshy parts of fruit.

Armour's

Blood Bone Potash 5-8-7
Super-Phosphate-20%-45%

1933

All Previous Price Lists Are Hereby Canceled

PRICES SUBJECT TO CHANGE WITHOUT NOTICE

I HAVE again the pleasure of presenting to you my catalogue for the coming season, and hope you will be induced by the extremely low prices to favor me with your orders which shall have my careful and prompt attention.

All my seeds have been selected with the utmost care and attention therefore I am sure of their superior quality. No complaint can be entertained unless made on receipt of the goods and invoice, and no warranty or guaranty is given either as to description, quality, productiveness or any other matter of any seeds I send you, nor will I be responsible for the quality or value of the crops produced therefrom. Nevertheless I will certainly pay attention to any founded complaint, but a restitution of any article can never exceed the amount charged for in the invoice.

Being able and ready to meet all respectable competition, I would be glad to be informed if you are offered any article lower than these prices, and in such cases, I will, if possible, give you other quotations.

ALL ACCOUNTS ARE DUE AND PAYABLE ON JUNE 1ST
unless otherwise agreed upon.

References as to quality of seeds sold by me; any of the leading market gardeners in the vicinity.

Respectfully,

O. MACHHOLZ.

NOVELTIES

1933

BEET

"GOOD FOR ALL"

This is the most uniform strain of Beet that has been developed. Leaves are narrow and tops much shorter than any strain of Detroit Red, being 10 to 15 inches tall, depending on growing conditions. The skin is smooth and very dark red, the interior color a deep crimson vermillion.

BEET

"CRIMSON KING"

A variety developed for those who want a large beet, with deep blood red interior color.

BEET

"OHIO CANNER"

This beet has been developed to meet the demands of the Canner. The intense ox blood red color of the flesh together with the round shape of the root when still quite small makes this an ideal beet for the canner.

PARSNIP

"SHORT THICK"

This variety makes a fine bunch vegetable. The tops are only half the size of the Hollow Crown. The roots are full crowned and rounded on top, and it is fully one month earlier than Hollow Crown. The flavor is excellent and the roots are free from strings or woody fibres.
